# Multidirectional Alsina

## Reinforced scaffold

The steel reinforced scaffolding provides a stable work structure that allows safe placement of rebar in the wall.

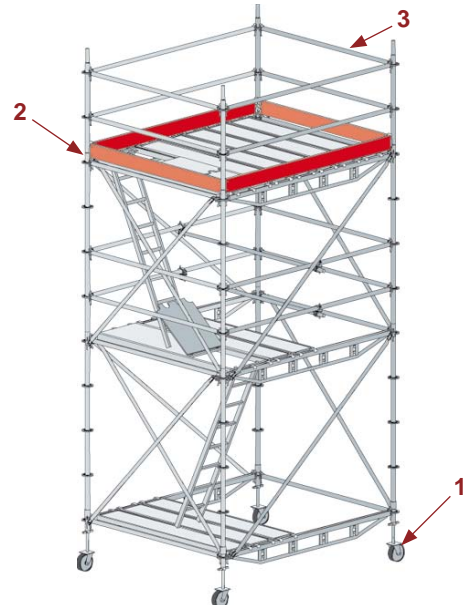

- Multiple measurements and complete range of accessories for maximum flexibility.
- It has wheels so that it can be moved horizontally and accessories for transport with a crane.
- Light components easy to store on site.
- Highly resistant and durable materials.

## Mobile work platform

The mobile work platform allows safe operations carried out at a height; it is mainly used in concrete work and vibration of concrete pillars and walls.

The Alsina mobile work platform is independently stable and includes elements that reinforce its safety, such as baseboard, guardrail and intermediate guardrail, in accordance with the current standards.

- For use with pillars 3 to 9 m high.
- Highly resistant and durable materials (steel and aluminum).
- Designed and manufactured according to European Standard HD 1004.
- It has: 4 wheels with brakes (1), baseboard (2), and guardrail (3), as well as accessories for its vertical transportation with a crane.
